THE HERITAGE POOLS EXPERIENCE

When you choose Heritage Pools, LLC to design and build your pool, you're choosing unparalleled expertise. We've been crafting luxury pools in the Charleston area since 2004. Owned and operated by Michael Gesmond, South Carolina's only Certified Master Pool Builder & Design Professional, our team is driven by an unwavering commitment to quality, innovation, and your satisfaction.

Your dream pool isn't just a project for us. It's a chance to create a personalized outdoor space that you'll love. We know that pools are a hub for family and friends. They allow you to enjoy outdoor living without sacrificing privacy. Your pool is where you will make memories for years to come, so we make sure it will stand the test of time.

WHAT IS AN ELEVATED POOL AND WHY SHOULD I CHOOSE ONE?

An elevated pool is a type of swimming pool that's built above ground level, often on a platform or deck.

In many parts of the low country, property owners may experience challenges with soil, water tables, and tides. In situations where these elemental challenges are found, an elevated pool would provide a higher quality and longer lasting structure over an inground pool.

The elevated application not only helps meet the demands of the property's existing factors, but can add an extra sense of privacy from the surrounding neighborhood. Your peace of mind is worth the extra steps. Let's dive into those steps.

PHASE 1

THE FOUNDATION

Before we can design your dream pool, we need to inspect your yard and find out what kind of soil we're working with. We will bring in a specialist for this and perform a soil engineering test. This tells us what's in the earth and what the ground can support.

We are big believers in consulting with the experts in every realm that impacts your pool. Our structural engineer reviews your soil sample and provides their assessment of what the soil can support. With this assessment, Michael will bring his knowledge of pool building to provide you with the right solution for your pool, tailored to your property.

PHASE 2

WATERPROOFING

Now that we have a plan in place for the structure of your elevated pool, it's time to determine the waterproofing methods.

We have developed and perfected a proprietary process for waterproofing. That ensures proper water crystallization, stopping water from going through the shell. We've also established our own standards for the rebar and thickness of the shell so that you can float peacefully in your new pool, knowing everything is incredibly sound.

As you can imagine, this step in the process is crucial. What good is a beautiful pool in the world if it can't hold water?

PHASE 3

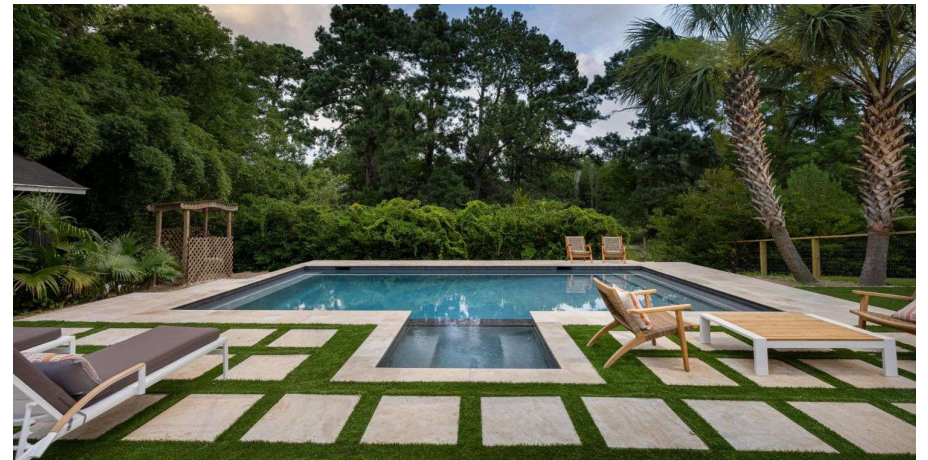

THE FUN PART

We've saved the best step for last. Now that we've taken care of every single technical consideration and are well on our way to building out the structure, it's time to select the finishes and features you want in your pool.

Have you been picturing yourself warming up in a jetted spa on chilly nights? Are you envisioning laying out on loungers in the summer months? What kind of scene do you want your outdoor lighting to create?

These are all the fun questions you get to ask yourself as we run through the specifics of your Heritage pool. From coping, to deck material, to water features, the choice is all yours. We have done the hard work and taken the extra time to safeguard your pool from potential malfunction, you can dream big.

That's the beauty of Heritage Pools - our expertise will take your vision and make it a reality.
